

PYTHON LEARNING

The journey from mediocrity to mastery

CONTENTS

What are loops??

What is 'break'

What is 'continue'

Live coding

WHAT ARE LOOPS?

WHAT → Loop allows us to execute a block of code repeatedly, either for a specific number of iterations or until a condition is met

WHY →

Automation of
Repetitive Tasks

Dynamic Operations
Based on Input Size

Reduce Code Repetition

Adapt to Changing
Conditions

Efficiency in Problem
Solving.

WHAT IS BREAK?

BREAK EXAMPLE

```
for item in shopping_list:  
    if item == "milk":  
        print("Found milk!")  
        break
```

WHAT → The break statement is used to exit a loop prematurely. It breaks the current loop and resumes execution at the next statement outside the loop.

WHY → Sometimes, you don't need to complete all iterations of a loop. With break, you can stop as soon as a condition is met, which saves unnecessary iterations and processing time.

WHAT IS CONTINUE?

CONTINUE EXAMPLE

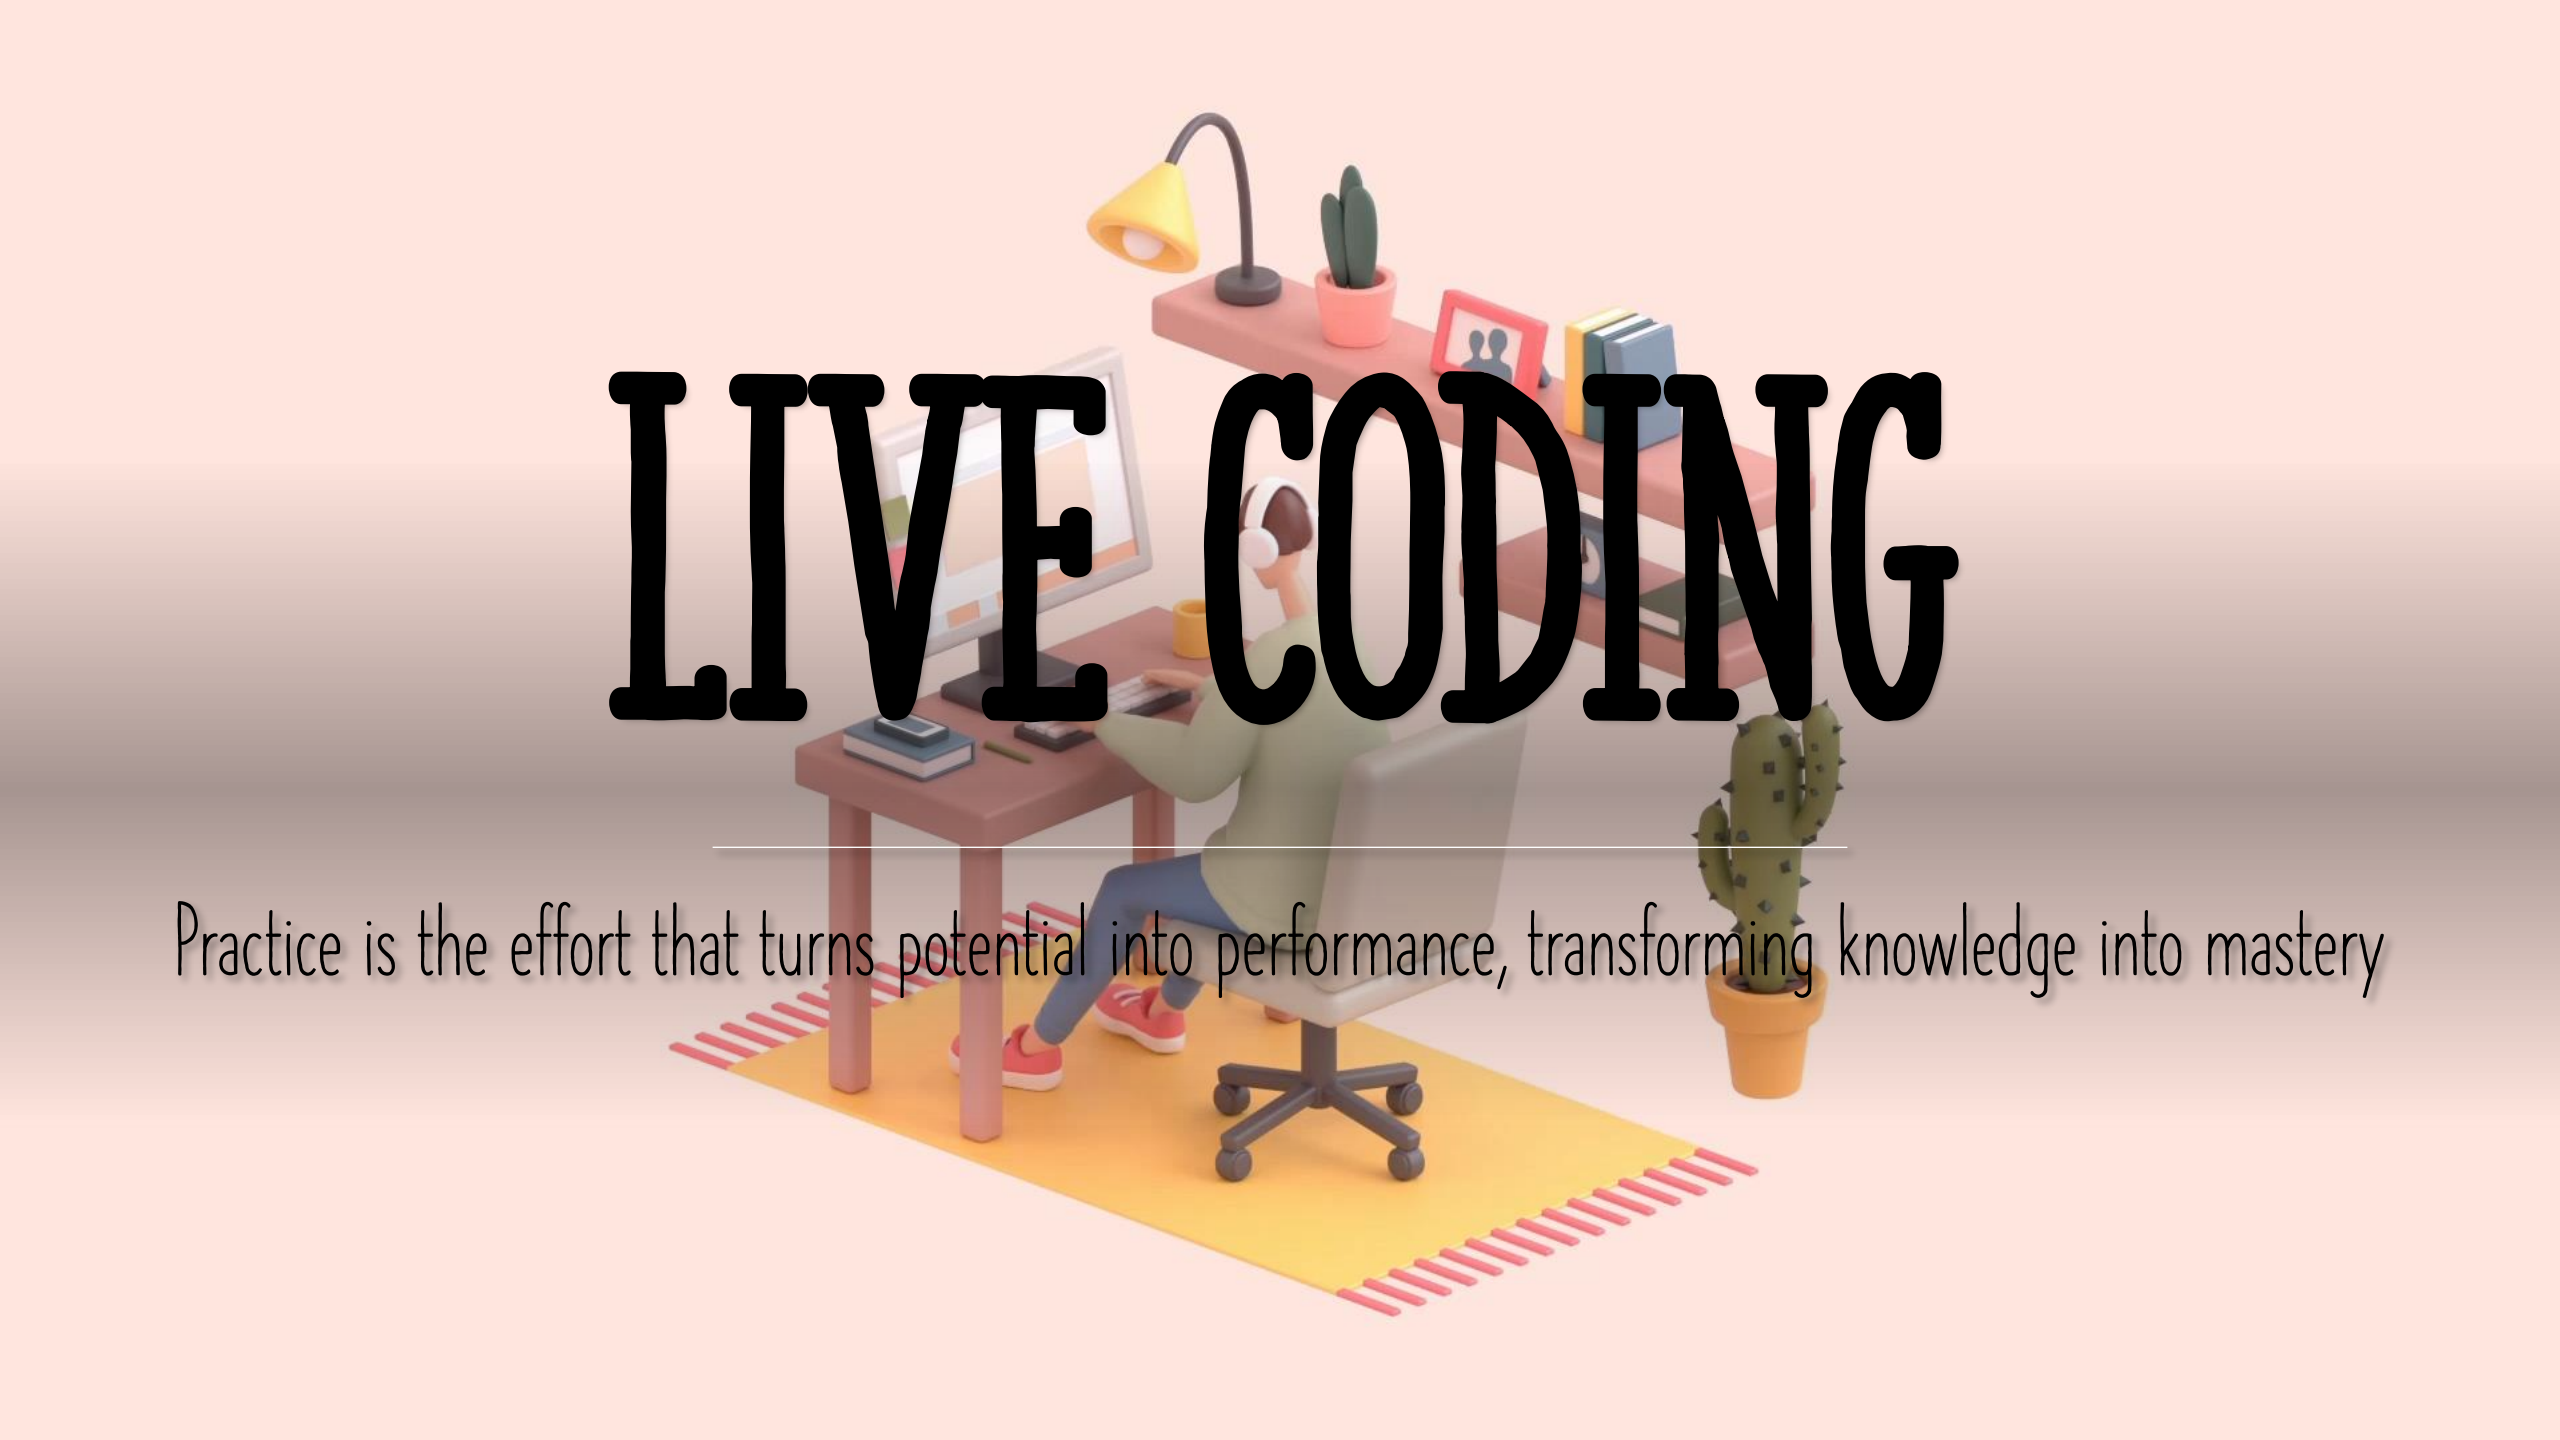

```
for i in range(1, 11):  
    if i % 2 == 0:  
        continue # skip even numbers  
    print(i)
```

1

WHAT → The continue statement skips the current iteration of a loop and moves on to the next iteration.

2

WHY → It's useful when you want to exclude certain cases but still complete the rest of the loop.

LIVE CODING

Practice is the effort that turns potential into performance, transforming knowledge into mastery

BREAK EXAMPLE

```
for item in shopping_list:  
    if item == "milk":  
        print("Found milk!")  
        break
```

CONTINUE EXAMPLE

```
for i in range(1, 11):  
    if i % 2 == 0:  
        continue # Skip even numbers  
    print(i)
```
