THE JOURNEY FROM MEDIOCRITY TO MASTERY

CONTENTS

What are functions?

Why do we need functions?

What are function arguments?

Live coding

WHAT ARE FUNCTIONS?

A function in programming is a reusable block of code designed to perform a specific task.

WHY USE FUNCTIONS?

**Code
Reusability**

Modularity

Maintainability

Readability

Abstraction

WHAT ARE FUNCTION ARGUMENTS

Function arguments are the actual values you pass to a function when you call it.

Parameters are like placeholders defined in the function.

Arguments are the real values that fill those placeholders when you call the function

Types:

- **Positional Arguments**
- Keyword Arguments
- **Default Arguments**
- Variable-Length Arguments (*args and **kwargs)

LIVE CODING

"Practice isn't the thing you do once you're good. It's the thing you do that makes you good."

Malcolm Gladwell

FUNCTION EXAMPLE

```
def square(number):  
    return number * number
```

```
a = square(4)
```

```
b = square(5)
```

```
c = square(6)
```
